# A CRM APPLICATION FOR THECHAISHOP&CO

**User Story:**

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer relationships and enhance sales processes using our CRM application.
I want to easily access and update employee details, as well as distinguish between online and offline customer records using unique types, allowing for personalized interactions.
Additionally, I need the application to accommodate sales transactions, such as order quantity and total bill amount, to ensure accurate and efficient transactions.
Moreover, I require the ability to generate insightful reports and dashboards to monitor sales and customer data effectively, aiding in decision-making and strategy development.
Lastly, I would like the application to automate email notifications to customers on their birthdays, enhancing their overall offline InStore experience by celebrating their special day and strengthening customer engagement and loyalty.

## 1. INTRODUCTION

### 1.1 Project Overview

The project "A CRM Application for TheChaiShop&Co" focuses on developing a bespoke, cloud-based Customer Relationship Management (CRM) system to manage customers, employees, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The project user story and objectives are detailed in the initial sections of this document.

### 1.2 Purpose :

The purpose of this project is to:

- Streamline contract vehicle/quality management
- Automate billing and order calculations
- Improve data accuracy
- Provide data-driven decision making
- Enhance customer engagement through accurate information

## I. IDEATION PHASE

### 1.3 Problem Statement (Customer Problem Statement Template)

| PS | I am (Customer) | I'm trying to | But | Because | Which makes me feel |
|---|---|---|---|---|---|
| PS-1 | Sales Representative | Manage customer orders and billing | Calculations are often inconsistent | Order quantity and billing are manual | Stressed and inefficient |
| PS-2 | Store Manager | Monitor sales and customer records | Reports are delayed and incomplete | Data is stored in multiple files | Confused and disorganized |
| PS-3 | Customer | Receive personalized offers and updates | I do not get timely notifications | There is no automated communication link | Disappointed and underserved |

**1.3 Empathy Map Canvas:**

**Target Users:**

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

**Empathy Analysis:**

| Aspect: | Description: |
|---|---|
| Think & Feel | Want accurate customer data and reports. |

| | |
|---|---|
| Date: | Feedback from management |
| Sol: | Multiple regional and procedures |
| Sar & Lar: | Enter data manually |
| Pain: | Errors, delays, data loss |
| Outc: | Automation, fast reports |

## 1.2 Brainstorming

### Brainstormed Ideas

- Manual CRM system
- Spreadsheet management
- Web-based CRM

- Salesforce-based CRM
- Automated end-to-end process

**Selected Idea:**

Salesforce-based CRM Application for TheOneShopKCs.

## 3.REQUIREMENT ANALYSIS PHASE

3.2 Customer Journey Map :

Journey Stages :

- Login
- Access CRM Application
- Enter Customer Data

- Generate Orders
- Calculate Bills
- View Reports
- Distribute Matching

5.3 Detailed Requirements

**Functional Requirements**

| FR No | Requirement |
|---|---|
| FR-01 | User Login |

| | |
|---|---|
| FR-2 | Object Creation |
| FR-3 | Data Entry |
| FR-4 | Billing Automation |
| FR-5 | Report Generation |
| FR-6 | Email Automation |

**Non-Functional Requirements:**

**NFR-1: Usability**

The system should be easy to use for sales representatives, managers, school owners, and analysts without requiring technical training.

**Requirements:**

- Simple and intuitive user interface
- Clear navigation menus
- Easy to understand forms
- User-friendly dashboards

**Example:**

A new sales employee should be able to log in, enter customer details, and generate orders within a few minutes without help.

Salesforce Lightning UI provides drag and drop forms and easy navigation.

**NFR-2: Security**

The system must protect customer and business data from unauthorized access.

**Requirements:**

- Role-based access control
- Secure login authentication
- Encrypted data storage

- Data backup and recovery

**Examples:**

- Encryption and permission sets
- Object-level and field-level security
- Sandbox and testing access
- Secure login and password policies

**NFR-3: Reliability**

The CRM system should work correctly at all times and store data accurately without loss.

**Requirements:**

- Automatic data saving
- Regular system backups
- Error handling mechanisms
- Stable cloud environment

**Example:**

If a user enters sales data and the internet disconnects, the system should save the information and restore it later.

Salesforce cloud ensures automatic backups.

**NFR-4: Performance**

The system should respond quickly and handle large amounts of data efficiently.

**Requirements:**

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal delay

**Example:** When a manager generates monthly sales reports for hundreds of customers, the report should load within 2-3 seconds.

Optimized queries and caching improve speed.

### NFR-4: Availability

The system should be accessible whenever required.

**Requirements:**

- 24/7 system availability
- Minimal downtime
- Complete backup
- Disaster recovery

**Example:** Managers should be able to access the CRM system during peak business hours, weekends, or late nights.

Salesforce Cloud provides high uptime.

### NFR-5: Scalability

The system should support business growth without affecting performance.

**Requirements:**

- 10,000+ concurrent users
- Support increasing customer data
- Expandable storage
- Maintain system speed

**Example:** If TechCorp Solutions expands to multiple branches, the CRM system should support thousands of customers without slowing down.

Salesforce infrastructure automatically scales.

## 3.3 Data Flow Diagram

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards

### 5.4 Technology Stack

| Layer | Technology |
|---|---|
| Frontend | Salesforce Lightning |
| Backend | Salesforce Cloud |
| Automation | Flows |
| Backend | Salesforce Rules |
| Analytics | Reports & Dashboards |

# 6. PROJECT DESIGN PHASE

## 6.1 Problem-Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

## 6.2 Proposed Solution:

**Functional Requirements**

| Parameter | Description |
| --- | --- |
| User Login & Authentication | Allows authorized users to securely log in to the CRM system using valid credentials. |
| Customer Record Management | Enables users to create, view, update, and delete customer details such as name, contact number, and address. |
| Employee & Associate Management | Allows management of employee and associate account information for business operations. |
| Order Management | Supports creation and tracking of customer orders, including order quantity and product details. |
| Automated Billing System | Automatically calculates total bill amount using formula fields based on order quantity and pricing. |
| Validation Rules | Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar. |
| Record Types & Page Layouts | Provides different record types and layouts for various customer and employee categories. |
| Global Picklists | Maintains standardized values for fields such as product type, category, and status. |
| Email Notification System | Sends automated email to customers for bookings, offers, and order confirmations. |
| Workflow & Flow Automation | Automates tasks such as updating records and triggering alerts using Salesforce Flows. |
| Report Generation | Generates detailed reports on sales, customers, and employee performance. |
| Dashboard Visualization | Displays real-time analytics through interactive dashboards and charts. |
| Data Backup & Recovery | Ensures secure storage and recovery of business data in the Salesforce cloud. |
| User Role Management | Controls system access using profiles and permission sets for users and teams. |

## 4.3 Solution Architecture

**Architecture Layers**

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.

# 5. PROJECT PLANNING & SCHEDULING

## 5.1 Project Planning

- The project followed an Agile-based development approach with defined milestones and sprints.
- A Salesforce Developer account was created to set up the development environment.
- Custom objects were designed to store customer, employee, and transaction data.
- Custom tabs and a Lightning Application were developed for easy system navigation.
- Fields, relationships, and global picklists were configured to ensure data consistency.
- Page layouts and record types were created based on user roles and customer categories.
- Validation rules were implemented to prevent incorrect data entry.
- Email templates and automated flows were designed for customer notifications.
- Reports and dashboards were created for performance monitoring and analysis.
- Daily/bi-sprint reviews and testing were conducted to track progress and resolve issues.
- The project was completed within the planned timeline through systematic scheduling.

### Product Backlog, Sprint Scheduling, and Product Release Planning

Use the same template to create product backlog and sprint schedule

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|---|---|---|---|---|---|---|
| Sprint-1 | Customer Setup | USN-1 | As an admin, I want to create a Salesforce developer account so that I can configure and access the Trial Customer Org (SN) environment. | 1 | High | Members |
| Sprint-1 | Data Modeling | USN-2 | As an admin, I want to create Custom Objects so that customer data can be stored and managed systematically. | 3 | High | Members |
| Sprint-2 | Data Modeling | USN-3 | As a user, I want to create custom fields, relationships, and global picklists so that I can easily navigate and manage CRM records with data consistency. | 3 | High | Members |

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|---|---|---|---|---|---|---|
| Sprint-3 | Data Cleaning | USN-6 | As a manager, I want a dashboard summarizing key metrics (CRM operations and customer trends) to monitor business performance. | 8 | High | Members |
| Sprint-2 | Data Modeling | USN-5 | As an admin, I want to create customer segmentation models based on the collected data to identify high-value customers and optimize marketing efforts. | 5 | Medium | Members |
| Sprint-4 | Data Modeling | USN-7 | As a user, I want customer data access to identify recent purchase patterns, risk assessments, and recommendations for improving customer retention. | 5 | High | Members |
| Sprint-3 | Data Cleaning | USN-8 | As a manager, I want automated reports comparing marketing campaign performance and customer engagement metrics to measure campaign effectiveness. | 8 | Medium | Members |
| Sprint-1 | Automation | USN-9 | As a system, I want to automatically update customer records and order status in real-time to maintain accurate data across all platforms. | 8 | High | Members |
| Sprint-1 | Automation | USN-10 | As a system, I want automated tools to send order notifications to the customer and internal teams upon order updates. | 8 | High | Members |
| Sprint-4 | Automation | USN-11 | As a system, I want to automatically calculate and flag anomalies in the financial data (e.g., unexpected spikes, missing data, etc.). | 5 | High | Members |
| Sprint-2 | Reports | USN-12 | As a manager, I want dashboards and automated reports on the CRM system's performance and customer interactions to track business performance and make informed decisions. | 8 | High | Members |
| Sprint-4 | Dashboards | USN-13 | As a manager, I want a dashboard that provides a real-time view of key business metrics, customer trends, and operational efficiency. | 5 | Medium | Members |

Project Tracking, Velocity & Burndown Chart: (4 Marks)

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|---|---|---|---|---|---|---|
| Sprint-1 | 20 | 6 Days | 24 Oct 2022 | 30 Oct 2022 | 20 | 30 Oct 2022 |
| Sprint-2 | 20 | 6 days | 31 Oct 2022 | 06 Nov 2022 | | |
| Sprint-3 | 20 | 6 Days | 07 Nov 2022 | 12 Nov 2022 | | |
| Sprint-4 | 20 | 6 Days | 13 Nov 2022 | 18 Nov 2022 | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

## 6. Project Development Phase:

### Project Flow

Milestone 1 : Creation of developer account
Milestone 2 : Object Creation
Milestone 3 : Tabs
Milestone 4 : The Lightning App
Milestone 5 : Social Profile
Milestone 6 : Fields and Relationships
Milestone 7 : Creation of Page Layout
Milestone 8 : Creation of Record Types
Milestone 9 : Validation rules
Milestone 10 : Email Templates
Milestone 11 : Flows
Milestone 12 : Reports and Dashboards
Milestone 13 : Conclusion

### What you'll learn

1. Real-Time Salesforce Project

1. Standard and Custom objects
2. Fields/ Attributes
3. Types of Fields & their relationships
4. Page Layouts
5. Record Types
6. Validation Rules
7. Email Templates
8. Apps
10. Reports and Dashboards

## Implementation

### Milestone 1 - Salesforce developer account creation

### Activity 1: Creating Developer Account

Creating a salesforce org in sandbox

1. Go to https://developer.salesforce.com/signup
2. On the sign up form, enter the following details

1) First name & Last name
2) Email
3) Role : Developer
4) Company : College/ Company name
5) Country : India

6) Postal Code : pin code

7) Username : should be a combination of your name and company name (must not be an issue already, you can type anything in this space)

[illegible]

Click on sign me up after filling these.

## Activity 2: Account Activation :

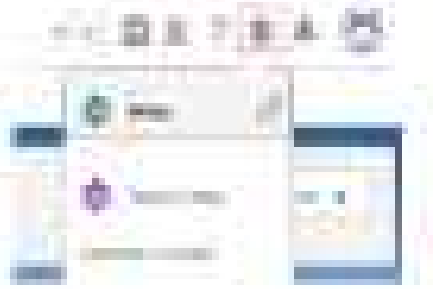
1. Go to the inbox of the email that you used while signing up. Look for the verify account to activate your account. The email may take 5-10mins.

2. Click on verify Account.
3. Give a password and answer a security question and click on change password.

4. Then you will redirected your salesforce setup page

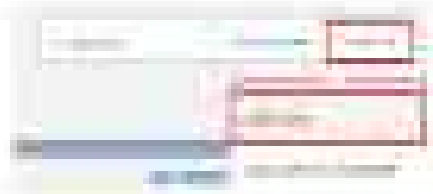
## Milestone 3 : Objects

1. In your Salesforce org, click gear icon on the top right and select Setup to open Setup



2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object.



## Activity 1 : Employer Account Object

1. [illegible] page → Click on Object Manager → Click on Create → Click on Custom Object.
   - Label : Employer Account
   - Plural Label : Employer Accounts
   - Enter Record Name Label and Format:
     Record Name : Employer Account Name
     Data Type : Text
   - In Optional features , check the boxes for Allow Reports | Allow Activities | Track Field History
   - Search Status : check the box for Allow Search.
   - Save

**Activity 2 : Customer Account Object**

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
   - **Label** : Customer Account .
   - **Plural Label** : Customer Accounts
   - Enter Record Name Label and Format:
     - Record Name : Customer Account Name
     - Data Type : Text
   - In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History
   - Deploy Status : Change this to Allow Search
   - Save

**Activity 3 : Enterprise Account Object**

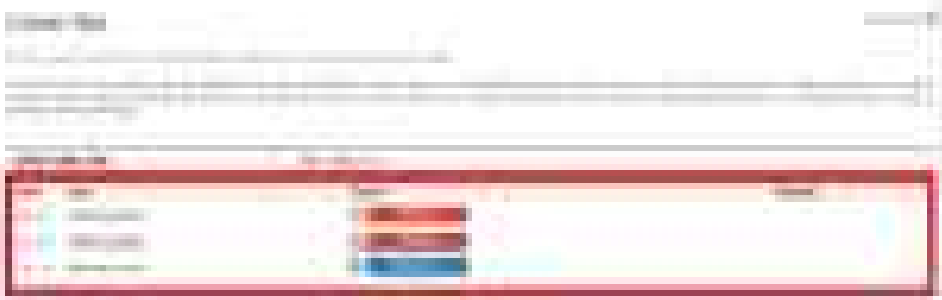
1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
   - **Label** : Enterprise Account
   - **Plural Label** : Enterprise Accounts
   - Enter Record Name Label and Format:
     - Record Name : Enterprise Account Name
     - Data Type : Text
   - In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History
   - Deploy Status : check the box for Allow Search
   - Save

**<u>Milestone 2 : Tabs</u>**

**Activity 1 : Custom tabs creation**

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → Now (under custom object tab)

2. Select Object Manager > Accounts > Select the site style > Assign it to profiles page layout as default > Save (Go to Custom Apps > and click Finish on build tab.
3. Make sure that the appropriate custom landing pages in accounts is chosen.
4. Click save.
5. Repeat the same steps for Customer Accounts and Enterprise Accounts.



## Milestone 4 – The Lightning App

### Activity 1: Create a Lightning app

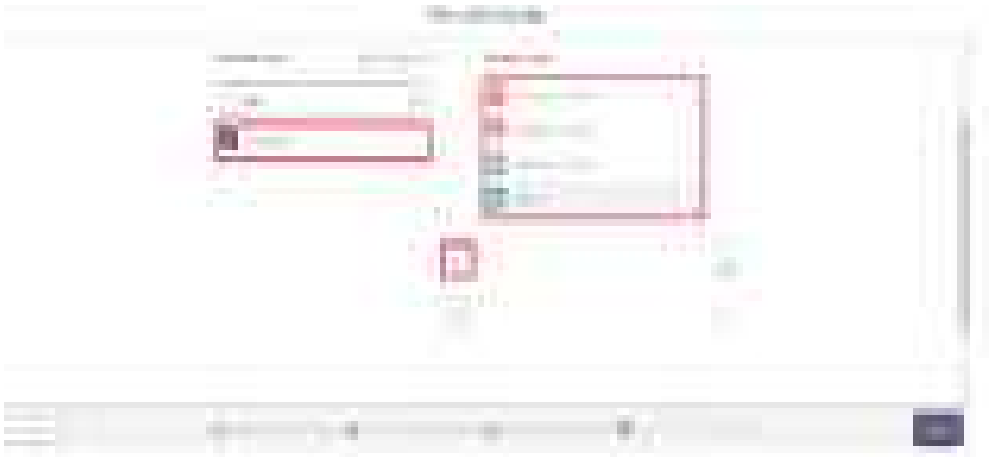
1. Go to setup page > search "app manager" in quick find > select "app manager" click on New Lightning App.

i. Fill the app name in app details and branding as follows:
   App name : Electrostatics
   DEVELOPER NAME : ALBI PRAKASH
   And image icons (if you want to give any image you can upload for
   branding) - Add Primary color HEX or leave it to default.
   Then click Next.

ii. In app options:
   Navigation style : Standard navigation
   Setup experience : setup
   Supported form factor : Desktop and phone
   Then click Next.

iii. In Utility items
   Utility Bar appearance : Default
   Then click Next.

iv. Navigation items
   Select the created Custom Objects and required standard objects
   - Customer Accounts
     Employee Accounts
     Enterprise Accounts
     Reports
     Dashboards



6. To add Lab Profile : [illegible]

7. Click Save & Close.

## Milestone 2 : Global Picklist

Activity 1 : Create Global Picklist

1. In Quick find box search for : Picklist value sets and click New.

- **Label** : Gender
  **Name** : Auto Populate
  **Values** : Male
  Female
  Other
  Click **Save & New**

2. Create another Auto populate following the same steps
   - **Label** : Items
     **Name** : Auto populate
     **Values** : Platinum Tea Powder
     Double Delight Tea Powder
     Super Dust Tea Powder
     Samarita Biscuits (Value Pack)
     Samarita Biscuits (Premium Pack)
     Dry Fruit Biscuits
     Fruit Biscuits

Jail Biscuits
Multigrain Biscuits
Ragi Biscuits
Double Choco Chip Cookies
Butter Almond Cookies
Melting Moments Cookies
Honey Oats Cookies
Delight Box
Signature Box
Assorted Box

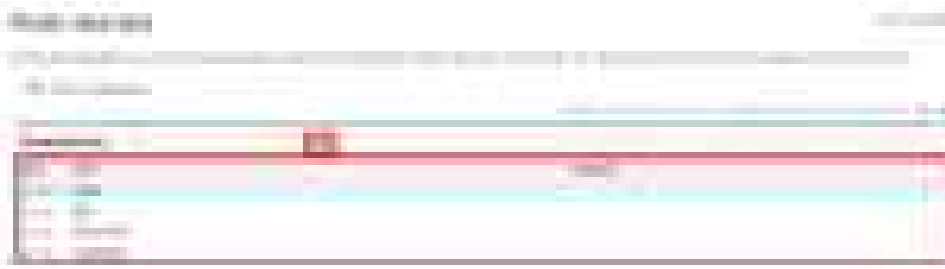
Click **Save & New.**

- **Label** : Payment Mode
  **Name** : Auto provides
  **Values** : Cash
  PhonePe
  Paytm
  Credit or Debit card
  Cash.

  Click **Save & New.**

- **Label** : Type of Items
  **Name** : Auto provides
  **Values** : Tea powder
  Cookies
  Gift Hamper

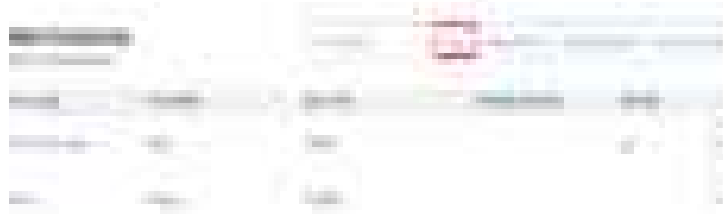
  Click **Save.**



## Milestone 5 : Fields & Relationships

### Activity 1 : Create Custom Fields for Employee Account

1. In your Salesforce org, click your icon in the top right and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the Object Manager page, in the Quick Find box, search for the custom object you just created: Employee Account.
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. These are the standard fields.
5. Click New to create a custom field. (If another dialog is open, let it quietly close so you're sure a brand-new field doesn't already exist.)



6. Here, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.

ii. Data Type : Text
Field Label: First Name
Field Name : Auto Populate
Length : 20
Required : Check the box
Click on Save - Save and new

iii. Repeat the same steps for remaining fields

- Data Type : Text
  Field Label: Last Name
  Field Name : Auto Populate
  Length : 20
  Required : Check the box
  Click on Next - Next - Save and new
- Data Type : Picklist
  Field Label: Gender
  Values : Use Global Picklist value set and select Gender from the dropdown menu.
  Field Name : Auto Populate
  Required : Check the box
  Click on Next - Next - Save and new

- Data Type : Phone
  Field Label : Phone Number
  Field Name : Auto Populate
  Required : Check the box
  Click on Next → Next → Save and view
- Data Type : Email
  Field Label : Email ID
  Field Name : Auto Populate
  Required : Check the box
  Click on Next → Next → Save and view
- Data Type : Date
  Field Label : Date of Birth
  Field Name : Auto Populate
  Required : Uncheck the box
  Click on Next → Next → Save and view
- Data Type : Text
  Field Label : Aadhar Number
  Field Name : Auto Populate
  Length : 12
  Click on Next → Next → Save and view
- Data Type : Text
  Field Label : PAN Details
  Field Name : PAN_Details

Length : 10
Click on Next → Next → Save and new

- Data Type : Picklist
  Field Label : Designation
  Field Name : Auto Populate
  Value : Enter value, with each value separated by a new line
  Manager
  Finance and Accounting
  Admin staff
  Cashier
  Delivery
  Click on Next → Next → Save and new

- Data Type : Currency
  Field Label : Salary
  Field Name : Auto Populate
  Click on Next → Next → Save

## Activity 2: Create Custom fields for Customer Account

1. DATA TYPE : TEXT
   Field Label: First Name
   Field Name : Auto Populate
   Length : 20
   Required : Check the box
   Click on Next → Next → Save and new

2. Data Type : Text
   Field Label: Last name
   Field Name : Auto Populate
   Length : 20
   Required : Check the box
   Click on Next → Next → Save and new

3. DATA TYPE : PICKLIST
   FIELD LABEL: GENDER
   Values : Use Global Picklist value set and select Gender from the dropdown menu.

Field Name : Auto Populate
Required : Check the box
Click on Next → Next → Save and new

4. Data Type : Phone
Field Label : Phone Number
Field Name : Auto Populate
Required : Check the box
Click on Next → Next → Save and new

5. Data Type : Date
Field Label : Date of Birth
Field Name : Auto Populate
Required : Check the box
Click on Next → Next → Save and new

6. Data Type : Formula
Field Label : Date of Birthday is today ?
Field Name : Auto Populate
Formula Return : Checkbox
Formula :

```
IF(
AND(
DAY( TODAY() ) = DAY( Date_of_Birth__c ) ,
MONTH( TODAY() ) = MONTH( Date_of_Birth__c ) ),
TRUE,
FALSE)
```

Click on Next → Next → Save and new

7. Data Type : Email
Field Label : Email ID
Field Name : Auto Populate
Required : Check the box
Click on Next → Next → Save and new

8. Data Type : Text
Field Label : Address
Field Name : Auto Populate
Length : 120
Click on Next → Next → Save and new

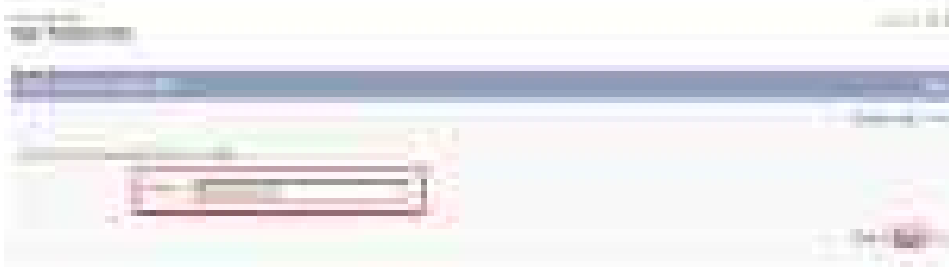
9. Data Type : Multi Select Picklist
   Field Label : Type of Item
   Values : List Global Picklist value list and select type of items from the dropdown menu.
   Field Name : Auto Populate.
   Required : Check the box
   Click on Next → Next → Save and new

10. Data Type : Multi Select Picklist
   Field Label : Products purchased
   Values : List Global Picklist value list and select items from the dropdown menu.
   Field Name : Auto Populate.
   Required : Check the box
   Click on Next → Next → Save and new

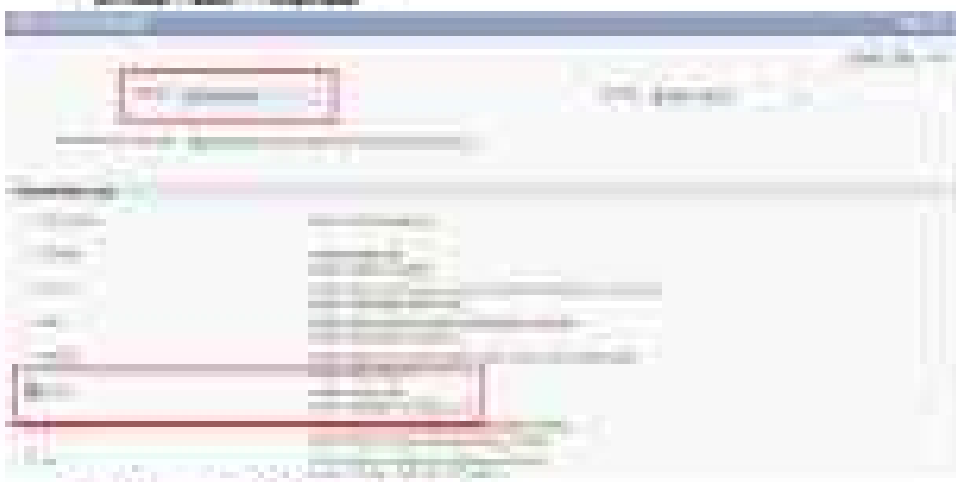
11. Data Type : Multi Select Picklist
   Field Label : Chai
   Values : Enter value, with each value separated by a new line
      Tea(Masala/Ginger/Lemon Tea
      Single Tea
      Masala Tea
      Lemon Tea
      Ginger Tea
      Green Tea
      Sugar Free Tea
   Click on Next → Next → Save and new

12. Data Type : Picklist
   Field Label : Payment Mode
   Values : List Global Picklist value list and select Payment Mode from the dropdown menu.
   Field Name : Auto Populate.
   Required : Check the box
   Click on Next → Next → Save and new

13. Data Type : Lookup Relationship
   Related To : Employee Account
   Field Label : Associated Employee
   Field Name : Auto Populate
   Click on Next → Next → Save and new



14. Data Type: Formula
    Field Label: Order Quantity
    Field Name: Auto_Population
    Formula Return: Number



CASE(Formula + Quantity, (NUMBER) 1,

Click on Next → Next → Save and Next

15. Select type : Formula

Field Label : Total 59

Field Name : Auto Populate

Formula Return : Number

Enter Formula = Quantity (Number) *

Click on Next → Next → Save

## Activity 3: Create Custom fields for Enterprise Account

1. Data Type: Text
   Field Label: Enterprise Name
   Field Name: Auto Populate
   Length: 25
   Required: Check the box
   Click on Next → Next → Save and new

2. Data Type: Phone
   Field Label: Phone Number
   Field Name: Auto Populate
   Required: Check the box
   Click on Next → Next → Save and new

3. Data Type: Email
   Field Label: Email ID
   Field Name: Auto Populate
   Required: Check the box
   Click on Next → Next → Save and new

4. Data Type: Text
   Field Label: Address
   Field Name: Auto Populate

Length : 120

Click on Next → Next → Save and new

5. Data Type : Multi Select Picklist
   Field Label : Type of Item
   Values : Use Global Picklist value set and select Type of Items from the dropdown menu.
   Field Name : Auto Populates.
   Required : Check the box
   Click on Next → Next → Save and new

6. Data Type : Multi Select Picklist
   Field Label : PRIMOSQUARSOO
   Values : Use Global Picklist value set and select Items from the dropdown menu.
   Field Name : Auto Populates
   Required : Check the box
   Click on Next → Next → Save and new

7. Data Type : Lookup Relationship
   Related To : Employee Account
   Field Label : Associated Employee
   Field Name : Auto Populates
   Click on Next → Next → Save and new

8. Data Type : Formula
   Field Label : Order Quantity
   Field Name : Auto Populates
   Formula Return Type : Number
   Enter Formula = Quantity (Number) +

```
IF(ISCLOSED(Product_Purchased__c), "Platinum Tier Number", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Double Diamond Tier Number", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Super Gold Tier Number", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Generic Beauty (Value Pack)", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Generic Beauty (Premium Pack)", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Hair Care Bundle", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Anti Dandruff", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Nail Polish", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Shampoo Bundle", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Face Bundle", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Double Diamond Tier Diamond", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Anti Wrinkle Cream", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Anti Age Cream Bundle", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Hair Care Product", 0) +
    IF(ISCLOSED(Product_Purchased__c), "Deep Gold", 0) +
```

[illegible]
```

7. Data Type : Picklist
Field Label : Payment Mode
Values : Cash Online Pickup (Add on the fly)
Enter payment mode that the customer prefers.
Field Name : Auto Populate
Required : Check the box
Click on Next → Next → Save

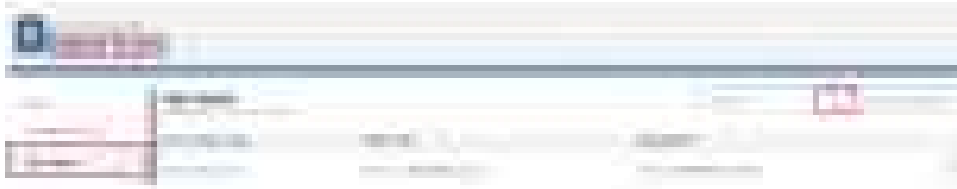
## Milestone 2 : Page Layouts

For the personalized fields used in Customer Accounts, we create two page layouts. Online orders and cash in store.

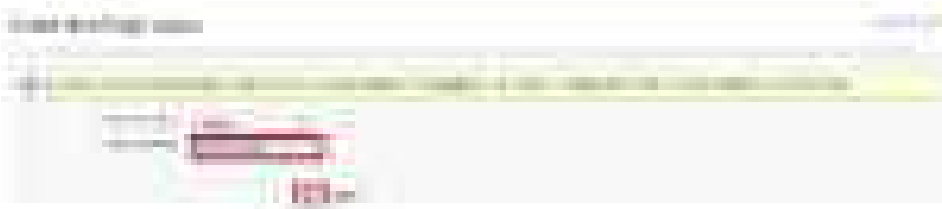
### Activity 1. Online Orders page layout

1. Go to the setup page → click on object manager → type order in the search box and select Customer Account object.

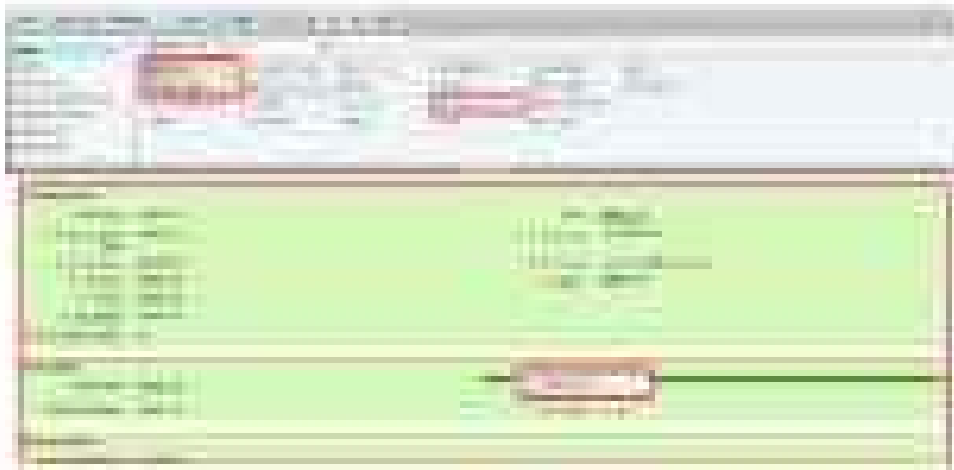
2. Click on the Page Layouts → click New



2. Page Layout Name : Online Orders and click Save



4. Drag and Arrange all the required fields as shown below



5. Click Save

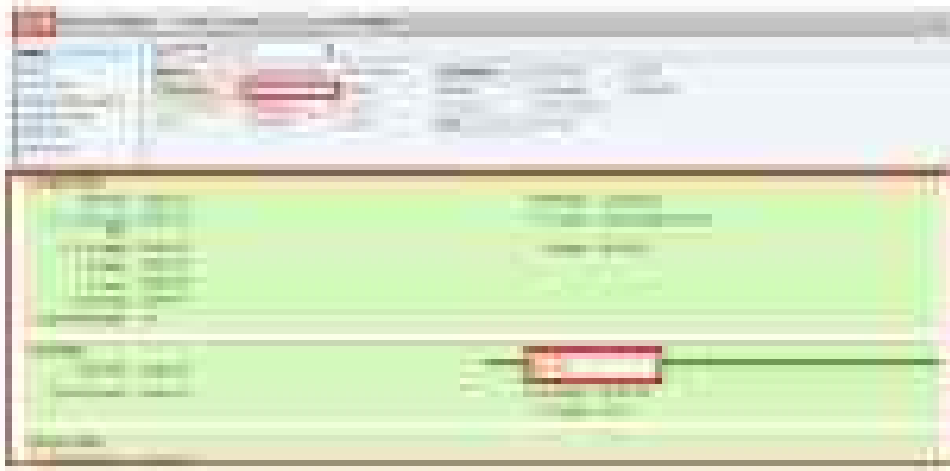
## Activity 2: Walk in Orders page layout

1. Go to the setup page → click on object manager → From drop down box click to **Customer Account** object.

2. Click on the Page Layouts → click New

3. Page Layout NAME : WALK-IN ORDER and click Save.

4. Drag and Arrange all the required fields as shown below.



5. Click Save.

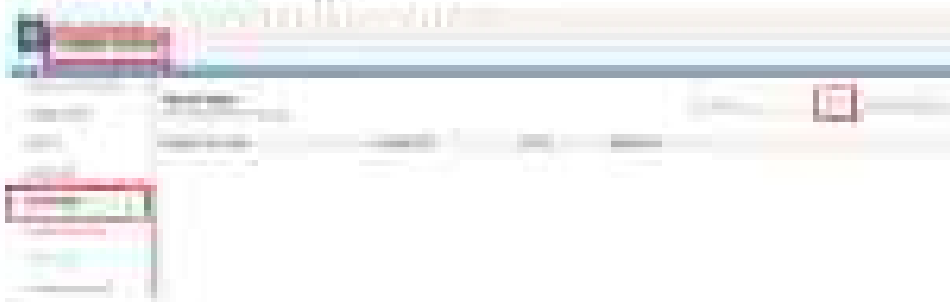
## Milestone E – Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two:
DISTRICT RECORD TYPE.
Online Orders and Walk-in orders.

### Activity 1: Online Orders Record Type

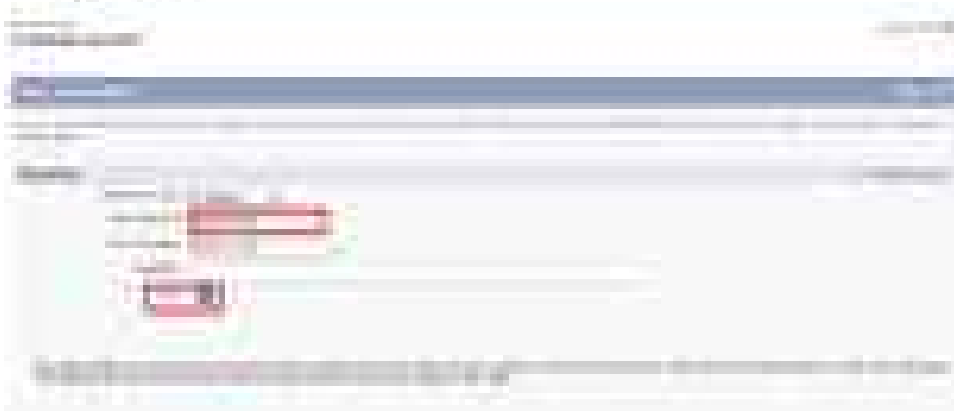
1. Go to the setup page → click on object manager. → From drop down pick and list for Customer Account object.

2. Click on the Record Types → click New.

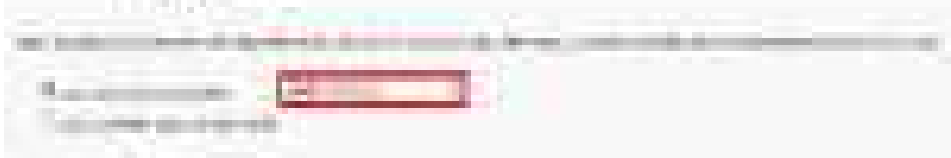


3. Enter Details:
   Existing Record Type : Master
   Record Type Label : Online Order.

Record Type name : Auto Populate
Active : Tick the checkbox
Click Next



4. In assign Page Layouts
   - Select Apply the layout to the profiles : select Online ordering for the drop down menu.



5. Click Save and New

## Activity 2: Walk-In Orders Record Type

1. Go to the setup page → click on object manager → From scrap search bar type in Customer Account object.

2. Click on the Record Types → click New

3. Enter Details
   Existing Record Type : Master
   Record Type Label : Walk-In Order
   Record Type Name : Auto Populate
   Active : Tick the checkbox
   Click Next

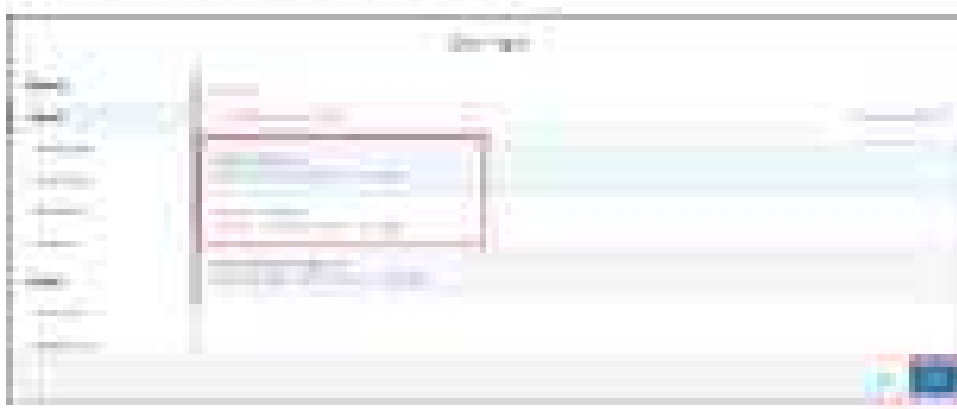
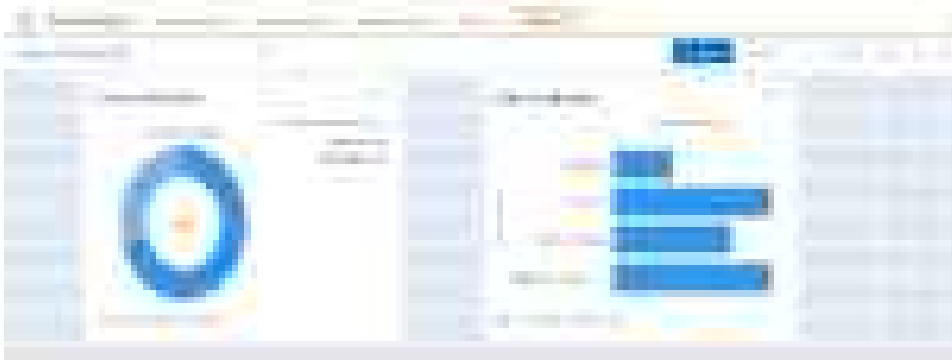
7. Select Customer Account Sales Report



9. Display As : Select the one which you feel comfortable with.
10. Click Add.

12. Repeat the same steps for the Enterprise Account Sales Report.
11. Click Save.



**Milestone 12 – Conclusion**

In conclusion, the development of TheDeliveryGuy CRM application marks a significant stride in enhancing the client's operational efficiency and customer relationship management capabilities. Seamlessly integrating employee details, customer information (both online and offline), and enterprise data, this application streamlines business processes and bolsters informed decision-making. The automation of sales calculations, including total quantity and total bill amount, reduces errors and improves employees' focus on delivering exceptional service. Moreover, automated email notifications to customers leverage Twilio's powerful communication and enhance customer engagement.

## 7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify core CRM functionalities. These include:

- Record creation for Employee, Customer, and Enterprise objects
- Validation rule testing for Aadhaar, PAN, and phone numbers
- Verification of Order & Type and page layouts
- Formula field validation for order quantity and billing
- Flow operations for invoicing and alerts
- Report and dashboard generation

Performance testing ensured fast response times and stable activity across concurrent usage.

## 8. ADVANTAGES & DISADVANTAGES

**Advantages:**

- Centralized data management

- Reduced manual work
- Automated calculations
- Improved customer engagement
- Data-driven decisions

**Trade-offs:**

- Requires initial training
- Internet dependency
- Limited offline access

## 9. Conclusion:

The CRM Application for TheCheckShopKCo successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The system reduces errors, saves time, and enhances customer relationships through automation and analytics.

## 10. FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- Multi-branch support
- Advanced customer profiling
